```

1.- Importación de la matriz

```
data(iris)
```

2.- Exploración de la matriz

```

3.- Nombre de las columnas

```

 Generación de tablas
```

1.- Convertimos la matriz de datos a un data frame, se Agrupan los valores para la variable Petal.Length y se calcula la frecuencia absoluta.

```
tabla_PL<-as.data.frame(table(PL = iris$Petal.Length))
```

2.- Frecuencia absoluta de la variable Petal.Length (PL) Se muestra la tabla de contingencia para la variable PL con su respectiva frecuencia absoluta.

```
tabla_PL

4.- Agruparemos las variables en 8 clases y se calcula la frecuencia absoluta

```
tabla_clases<-as.data.frame(table (Petal.length = factor
                                   (cut(iris$Petal.Length,
                                        breaks = 8))))

7.- Organización visual de la tabla (variable Petal.length)

7.1.- Instalamos la librería knitr

```
install.packages("knitr")
```

```
## Installing package into '/cloud/lib/x86_64-pc-linux-gnu-library/4.3'
## (as 'lib' is unspecified)
```

```
install.packages("xfun")

```

7.2.- Se abre la librería

```
library(knitr)
```

7.3.- Se visualiza la tabla

```
